

Block diagram of a transmission/reception unit 200. A signal line labeled "MSi" enters from the top. It splits into two paths: one goes directly to the "MTX/RX2" block, and the other goes through a junction point to the "MTX/RX1" block. Below "MTX/RX1" is a block labeled "MP". A line connects "MP" to the input of "MTX/RX2". The entire unit is enclosed in a box labeled "G 2" with a triangle symbol.
